**(54) WATER BAG FOR
DRINK SERVING ALSO AS
INITIAL FIRE FIGHTING**

(57) Abstract:

PURPOSE: To simply use water subjected to water cleaning treatment for a drink or other applications by providing separately a grip part, a water pouring part and a water discharging part on the upper part position of a water bag structure body, and attaching a water cleaning implement of a suitable shape for

gripping to the position of the grip part.

CONSTITUTION: The structure of a water storage container is formed by a water bag-like structure, and in the upper part position of its water bag structure body 1, the grip part 4 is provided. In a position separated from the position of its grip part 4, the water pouring part 2 and the water discharging part 3 are provided separately. Also, to a position of the grip part 4, a water cleaning implement 7 is attached in advance, and it is formed in a shape being suitable for gripping the part of its water cleaning implement 7. Thus, confirmation can be executed by only looking at how much water is housed in a container from the outside. Also, water subjected to water clearing treatment can be used easily for a drink or other applications. Moreover, the water clearing implement attached to the grip part is formed in a shape being suitable for gripping, therefore, handling can be executed by only holding the grip part, and there is such an effect as it does not occur that a user injures his hand or he cannot hold it easily.
